## 1. Summary

This LINK cartridge is the official Mollie Commerce Cloud LINK integration.

You can find more information about Mollie here: <https://www.mollie.com/>. It is required to create an account and fill in the required settings before going live. There is always an option to create a free test account here: <https://www.mollie.com/dashboard/signup?lang=en>.

More information to get started: <https://www.mollie.com/be/developers>.

More information about the JSON API: <https://docs.mollie.com/reference/v2/payments-api/create-payment>.

More information about general integration: <https://github.com/mollie> This is handy to get a general idea of what Mollie is capable of.

The LINK cartridge was build and tested with SFRA version 6.0.0 and B2C Commerce version 21.6 (Compatibility Mode: 21.2)

## 2. Component Overview

### Functional Overview

Mollie provides an easy way to integrate with a wide range of payment methods and wallets. The integration makes use of REST API calls to Mollie. Commerce Cloud will then handle the responses and will process orders.

It is also possible to handle payment cancels, refunds and shipments in the Commerce Cloud Customer Service Center.

The following payment methods are supported by default:

- Bancontact
- Credit card
- PayPal
- iDeal
- Sofort Banking
- Bank transfer
- Belfius
- KBC
- Pay later
- Slice it
- Gift cards
- ING Home'Pay
- Giropay
- Eps
- Przelewy24
- Vouchers

More information about the payment methods can be found here:

<https://www.mollie.com/en/payments>. The payment method detail pages will show in which countries the payment methods are applicable.

The following wallets are supported by default:

- Apple Pay

## Use Cases

- As a customer, complete a checkout processes using the Mollie payment methods with the ability to remember your card data when logged in.
- As the merchant, view the Mollie payment details in the Business Manager
- As the merchant, perform custom actions regarding the payment (cancel payment, refund payment, ship order)
- As the merchant, configure multiple settings in the custom site preferences

## Limitations, Constraints

The plugin was built to work on the SFRA demo site.

The following Mollie API's are (partially) supported:

- Payment API
- Methods API
- Refunds API
- Orders API
- Shipment API
- Customers API

## Compatibility

Sitegenesis: Not supported

SFRA version: 6.0.0 (supports previous versions by limited code changes)

Compatibility mode: 21.2

## Privacy, Payment

Credit card data is never processed on the Commerce Cloud side.

New payments will be entered and processed on the Mollie Payment Page.

There is also a possibility to use the Customers API. This feature will allow the customer to remember and reuse the card data entered at a later stage. Card data is always stored on the Mollie environment, never in Commerce Cloud.

### 3. Implementation Guide

The LINK integration was developed using Visual Studio Code together with the prophet plugin. Open the project follow the steps:

- Make sure that node and npm are installed
- Go to the project root and enter “npm install” in the terminal
- After the install is complete, enter “npm run compile” to compile the css and js
- Upload the cartridges to the Business Manager

#### Setup of Business Manager

##### Setup Storefront Cartridges

The first thing to do is to setup the Storefront cartridges. The plugin exists out of 3 storefront cartridges. These cartridges will need to be added to Cartridge Path of the required Storefront Site(s).

Name	Purpose
<b>int_mollie</b>	Contains all the business logic pertaining order and payment management through the Mollie API.
<b>int_mollie_sfra</b>	Contains Payment and Checkout controllers and templates.
<b>mollie_sfra_changes</b>	Contains overwritten SFRA controllers and templates

It is important to add the cartridges in the following order. Insert these cartridges *before* **app\_storefront\_base** cartridge.

Cartridge List
<b>mollie_sfra_changes:int_mollie_sfra:int_mollie</b>

## Setup Business Manager Cartridges

When this is done, it is time to setup the Business Manager cartridges. There are 2 cartridges that you will need to be added to the cartridge path for the Business Manager.

Name	Purpose
<b>int_mollie</b>	Contains all the business logic pertaining order and payment management through the Mollie API.
<b>bm_mollie</b>	<ul style="list-style-type: none"><li>Contains a job to check for orders that have not been completed after 24 hours (configurable) and fails them. If by any chance the payment flow was completed for this order but failed, the order will be set to the complete status.</li><li>Contains custom Customer Service Centre actions per order. These actions will help maintaining the order.</li></ul>
<b>app_storefront_base</b>	Add this cartridge to provide the necessary business logic to the custom actions in the Customer Service Center

It is important to add the cartridges in the following order.

Cartridge List
<b>bm_mollie:int_mollie:app_storefront_base</b>

### Import data

The project also contains a **data** folder. This data folder contains jobs, custom attributes, services, payment processors and payment method required.

To import the data, follow the next steps:

- Site import
  1. Go to **Administration → Operations → Site Import & Export**
  2. Under **Import & Export Files** click on **Upload**
  3. Upload the **mollie-site-export.zip**
  4. Import the uploaded file

## Configuration

### Configure Mollie Preferences

After importing the data, the Mollie settings dashboard is available. This dashboard contains all global Mollie settings and is located under: **Merchant Tools → Site Preferences → Mollie Settings**.

Default Method (mollieDefaultEnabledTransactionAPI)	Set of Strings	The default enabled method API (Orders/Payment). Read more about the differences between the Payment and Orders API: <a href="https://docs.mollie.com/orders/why-use-orders">https://docs.mollie.com/orders/why-use-orders</a>
Default order expiry days (mollieDefaultOrderExpiryDays)	Set of Integers	Default expiry days for orders created with the Orders API.
Use Single Click Payments for Credit Cards (mollieEnableSingleClickPayments)	Boolean	Indicates if Single Click Payments are enabled. Read more about Single Click Payments and how it improves your conversion. <a href="https://help.mollie.com/hc/en-us/articles/115000671249-What-are-single-click-payments-and-how-does-it-work-">https://help.mollie.com/hc/en-us/articles/115000671249-What-are-single-click-payments-and-how-does-it-work-</a>
Use Mollie Components for Credit Cards (mollieComponentsEnabled)	Boolean	Indicates if Mollie Components are enabled. Read more about Mollie Components and how it improves your conversion. <a href="https://www.mollie.com/en/news/post/better-checkout-flows-with-mollie-components">https://www.mollie.com/en/news/post/better-checkout-flows-with-mollie-components</a>
Use QR code (mollieEnableQrCode)	Boolean	Indicates if the QR code feature is enabled. Read more about QR code and how it improves your conversion. <a href="https://docs.mollie.com/payments/qr-codes">https://docs.mollie.com/payments/qr-codes</a>
Log category (mollieLogCategory)	String	Log category used by SFCC. The log category can be selected under: "Administration -> Operations -> Custom Log Settings".

## Configure Services

It is necessary to configure the correct Mollie service credentials.

1. Go to **Administration** → **Operations** → **Services**
2. If the import was successful, you should see the following services

<a href="#">Mollie.CancelOrder</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CancelOrderLineItem</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CancelPayment</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CreateCustomer</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CreateOrder</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CreateOrderRefund</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CreatePayment</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CreatePaymentRefund</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.CreateShipment</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.GetMethod</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.GetMethods</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.GetOrder</a>	HTTP	<a href="#">Mollie</a>
<a href="#">Mollie.GetPayment</a>	HTTP	<a href="#">Mollie</a>

3. Go to the **Mollie Credentials**
4. Fill in the correct URL

## Configure Payment Methods

### Validating payment methods

Validate that the payments methods were imported correctly.

1. Go to **Merchant Tools → Ordering → Payment Methods**
2. There should be a list that contains the following payment methods

MOLLIE_APPLE_PAY	Apple Pay	Yes
MOLLIE_BANCONTACT	Bancontact	Yes
MOLLIE_BANKTRANSFER	Bank transfer	Yes
MOLLIE_BELFIUS	Belfius	Yes
MOLLIE_CREDIT_CARD	Credit card	Yes
MOLLIE_EPS	eps	Yes
MOLLIE_GIFTCARD	Gift cards	Yes
MOLLIE_GIROPAY	Giropay	Yes
MOLLIE_IDEAL	iDEAL	Yes
MOLLIE_ING_HOME_PAY	ING Home'Pay	Yes
MOLLIE_KBC	KBC	Yes
MOLLIE_KLARNA_PAY_LATER	Pay later	Yes
MOLLIE_KLARNA_SLICE_IT	Slice it	Yes
MOLLIE_PAYPAL	PayPal	Yes
MOLLIE_PRZELEWY	Przelewy24	Yes
MOLLIE_SOFORT	SOFORT Banking	Yes

3. These payment methods should be linked to the **MOLLIE\_ECOM\_DEFAULT** payment processor. If the payment method uses Mollie components use **MOLLIE\_ECOM\_CREDIT** instead. For QR code support (bancontact) use the **MOLLIE\_ECOM\_QR** payment processor.

When using the Orders API together with a paymentmethod supporting QR code payments, it is required to select the Payments API in the payment method configuration details:

**Mollie**

Payment method ID:	<input type="text" value="ideal"/>
Order expiry days:*	<input type="text" value="default (DEFAULT)"/> ▼
Method:*	<input type="text" value="payment (PAYMENTS API)"/> ▼
Mollie product category:	<input type="text" value="- NONE -"/> ▼

## Localizing payment methods

Payment methods are localizable, this means that you can, for example, change the payment method name for each locale/language. This can be done by switching the “Language” select to the desired locale/language.

The following fields are localizable:

1. Name
2. Description

[Merchant Tools](#) > [Ordering](#) > Payment Methods

### Payment Methods

The screenshot displays the Salesforce Payment Methods management interface. At the top, there's a navigation bar with 'Merchant Tools > Ordering > Payment Methods'. Below it, the 'Payment Methods' section header is shown. A table lists various payment methods with columns for ID, Name, and Language. The 'Name' column is highlighted with a red box. To the right of the table, a language dropdown menu is open, showing a list of languages including Default, Chinese, Chinese (China), Dutch, English, English (Canada), English (United Kingdom), English (United States), French, French (Canada), French (France), German, German (Germany), Italian, and Italian (Italy). Below the table, the 'BANK\_TRANSFER Details' section is visible, showing fields for Description, Image, Payment Processor, Countries, Currencies, and Customer Groups. The 'Description' field is also highlighted with a red box. At the bottom of the page, there's a footer with copyright information and system details.

ID	Name	Language
MOLLIE_APPLE_PAY	Apple Pay	Default
MOLLIE_BANCONTACT	Bancontact	Chinese
MOLLIE_BANKTRANSFER	Bank transfer	Chinese (China)
MOLLIE_BELFIUS	Belfius	Dutch
MOLLIE_CREDIT_CARD	Credit card	English
MOLLIE_EPS	eps	English (Canada)
MOLLIE_GIFTCARD	Gift cards	English (United Kingdom)
MOLLIE_GIROPAY	Giropay	English (United States)
MOLLIE_IDEAL	IDEAL	French
MOLLIE_ING_HOME_PAY	ING HomePay	French (Canada)

**BANK\_TRANSFER Details**

Description:

Image:  Select

Payment Processor:  None

Countries: All [Edit](#)

Currencies: All [Edit](#)

Customer Groups: All [Edit](#)

Min/Max Payment Ranges:  Min  Max

## Sorting payment methods

Payment methods can be sorted. This order will be used for displaying the payment methods in the checkout. Take the following steps to change the order of the payment methods:

1. Click on **Sort Order**
2. Drag the payment method to the desired place
3. Click on **Sort Order** again
4. Click on **Apply**

### Payment Methods

**Payment Methods**  
Payment methods are managed here. To create a new payment method, click the **New** button. To remove a payment method click the remove icon in the payment method row. The default payment methods can't be removed, and their IDs can't be changed. When you select the CREDIT\_CARD payment method, credit/debit cards can be reordered through drag-and-drop.

**New** **Sort Order** **Credit/Debit Cards** **Import/Export**

ID	Name	Enabled	Sort Order
MOLLIE_BANCONTACT	Bancontact	Yes	7
MOLLIE_CREDIT_CARD	Credit card	Yes	8
MOLLIE_PAYPAL	PayPal	Yes	9
MOLLIE_IDEAL	IDEAL	Yes	10
MOLLIE_SOFORT	SOFORT Banking	Yes	11
MOLLIE_APPLE_PAY	Apple Pay	Yes	12
MOLLIE_BANKTRANSFER	Bank transfer	Yes	13
MOLLIE_BELFIUS	Belfius	Yes	14
MOLLIE_KBC	KBC	Yes	15
MOLLIE_KLARNA_PAY_LATER	Pay later	Yes	16

**Payment Method Details**  
Please select a payment method to view its details.

## Pay after delivery payment methods

Pay after delivery payment methods

Pay after delivery payment methods such as Klarna Pay later or Klarna Slice it require the Orders API and cannot be used with the Payments API. This is because Klarna needs the order information to do a risk assessment.

## Bank transfer payment method

After using bank transfer as payment method, the payment information needed for the user to complete the payment like bank BIC, bank name, etc... will be saved on the **molliePaymentDetails** attribute and will be visible on both the confirmation and order details page.

The **molliePaymentDetails** attribute is located at: **Merchant Tools → Ordering → Orders → (select order) → Payment tab.**

Merchant Tools > Ordering > Orders > Order: 00007902(RefArch)

General Attributes **Payment** Notes History

Payment Information for Order '00007902'

<< Back to List

## Voucher payment method

The voucher payment method becomes visible when the basket contains one or more products that have filled in the **mollieProductCategory** attribute. The **mollieProductCategory** attribute is available on both the product page and payment method.

Note that the product attribute is leading and will overwrite the payment method attribute when filled in.

The **mollieProductCategory** for products can be found at **Merchant Tools → Products and Catalogs → Products → (select product) → Mollie product category**

The screenshot shows a web interface for selecting a Mollie product category. At the top, there is a 'Refinement Color' dropdown set to 'white (White)'. Below this is a 'Search Refinements' section with several filters: 'Skin Concern' (with options like '-None-', 'dryTight (Dry, Tight Skin)', 'comprehensive (Comprehensive Protection)', and 'liftingLossFirm (Lifting & Loss of Firmness)'), 'New Arrival?' (set to '-None-'), 'Sheets' (with options '-None-', 'value1 (Value 1)', 'value2 (Value 2)', and 'value3 (Value 3)'), and 'On sale?' (set to '-None-'). The 'Mollie' section at the bottom has a 'Mollie product category' dropdown menu that is open, showing options: '-None-', 'meal (meal)', 'eco (eco)', and 'gift (gift)'. The 'gift (gift)' option is selected. At the bottom right of the form are buttons for 'Apply', 'Reset', 'Copy', and 'Delete'. A link '<< Back to List' is at the bottom left.

The **mollieProductCategory** for the payment method can be found at **Merchant Tools → Ordering → Payment methods → (select payment method) → Mollie product category**

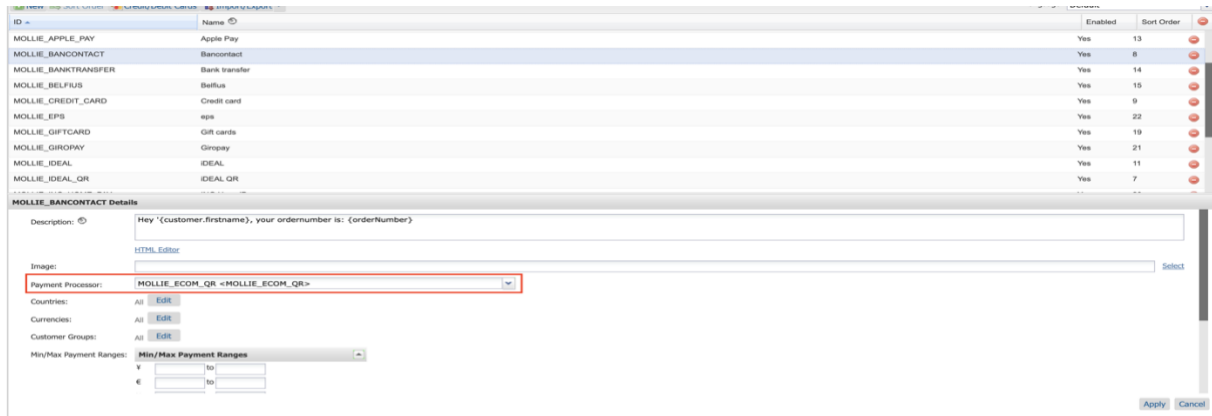

The screenshot shows the 'MOLLIE\_VOUCHER Details' configuration page. At the top, there is a table with two rows: 'MOLLIE\_SOFORT' (SOFORT Banking) and 'MOLLIE\_VOUCHER' (Voucher), both with 'Yes' status and counts of 11 and 23 respectively. Below this is the 'MOLLIE\_VOUCHER Details' section. It includes a 'Customer Groups' dropdown set to 'All' and an 'Edit' button. The 'Min/Max Payment Ranges' section has a table with columns for currency (Y, €, ¥, \$) and ranges (to, to). The 'Mollie' section at the bottom has a 'Payment method ID' dropdown set to 'voucher', an 'Order expiry days' dropdown set to 'default (DEFAULT)', and a 'Method' dropdown set to 'default (DEFAULT)'. The 'Mollie product category' dropdown is open, showing options: 'gift (gift)', '-None-', 'meal (meal)', 'eco (eco)', and 'gift (gift)'. The 'gift (gift)' option is selected. At the bottom right are buttons for 'Apply' and 'Cancel'.

For more information about the voucher payment method visit: <https://help.mollie.com/hc/en-us/sections/360004838160-Vouchers>

## QR code feature

The QR code feature can be enabled on the Mollie settings page located at **Merchant Tools → Site Preferences → Mollie Settings**. After enabling the general setting, the payment processor of the payment method located at **Merchant Tools → Ordering → Payment Methods** has to be changed to **MOLLIE\_ECOM\_QR**.

After selecting a payment method that is supported (bancontact) and placing the order, the QR code modal will show. Once the user scans the QR code and the payment is completed, the user will be redirected to the SFCC confirmation page.

Note that the QR code feature is only supported on the Payments API. For now only bancontact has QR code support, iDeal and bank transfer support will be added in one of the upcoming releases.

For more information about the QR code feature visit: <https://docs.mollie.com/payments/qr-codes>

### **Remaining attributes or settings**

There are also some custom attributes available on the payment methods. **Note that these payment specific attributes overwrite the general settings located under: Merchant Tools → Site Preferences → Mollie Settings**

ID	Type	Description
Payment method ID (molliePaymentMethodId)	String	The payment id from Mollie
Order expiry days (mollieOrderExpiryDays)	Enum-of-strings	expiry days for orders created with the Orders API.
Method (mollieEnabledTransactionAPI)	Enum-of-strings	enabled method API (Orders/Payment). Read more about the differences between the Payment and Orders API: <a href="https://docs.mollie.com/orders/why-use-orders">https://docs.mollie.com/orders/why-use-orders</a>
Product category (mollieProductCategory)	Enum-of-strings	Product category being used for the <b>voucher</b> payment method (meal/eco/gift). Read more about the voucher payment method here: <a href="https://help.mollie.com/hc/en-us/sections/360004838160-Vouchers">https://help.mollie.com/hc/en-us/sections/360004838160-Vouchers</a>

## 4. Testing

Configure the settings located under **Merchant Tools → Site Preferences → Mollie Settings** accordingly. Make sure the following settings are configured according to your Mollie account:

1. Environment
  - Set to “TEST” when testing with a Mollie test API key, “LIVE” for a production API key
2. API Key Test
  - The test token found on your Mollie dashboard
3. API Key Live
  - The token found on your Mollie dashboard
4. Profile ID
  - The Profile ID found on your Mollie dashboard
5. Default Method
  - The default enabled method API (Orders/Payment)
6. Default order expiry days
  - The default expiry days for orders created with the Orders API
7. Use Single Click Payments for Credit Cards
  - Set to true when you want to enable Single Click payments
8. Use Mollie Components for Credit Cards
  - Set to true when you want to enable Mollie Components
9. Log category
  - Category used by SFCC logs

## Checkout

### Checkout as a guest

## 5. Operations, Maintenance

### Data Storage

Data is stored on multiple locations.

- System Objects
  - PaymentMethod
    - molliePaymentMethodId – The id of the Mollie payment method
    - mollieOrderExpiryDays – The expiry days for orders created with the Orders API
    - mollieEnabledTransactionAPI – The enabled method API for this payment method
    - mollieProductCategory – Category used for paying with “voucher” method (eco/meal/gift)
  - PaymentTransaction
    - molliePaymentId – The id of the Mollie payment for orders created with the Payment API
    - molliePaymentStatus – The status of the Mollie payment for orders created with the Payment API
    - mollieIssuerData – Selected issuer data
    - molliePaymentDetails – Contains the Mollie payment specific details like bankBic, bankName,...
    - molliePaymentLink – Contains the Mollie payment link the customer can use to fulfill the payment
  - Order
    - mollieOrderId – The id of the Mollie order for orders created with the Orders API
    - mollieOrderStatus – The status of the Mollie order for orders created with the Orders API
    - mollieUsedTransactionAPI – The Mollie method API used for creating the transaction (order/payment)
    - mollieRefundStatus – Contains the status of the refund
  - Profile
    - mollieCustomerId – The id of the Mollie customer (used for single click payments)
  - Product
    - mollieProductCategory – Category used for paying with “voucher” method (eco/meal/gift)
- Order
  - Order History

Communication to and from Mollie will be logged in the Order History. This way the merchant knows exactly what happened with the payment.

**Availability**

When Mollie services are down the customer will not be able to complete the checkout.  
Service availability and performance can be check in the Salesforce backend by the merchant.

**Support**

TBD

## 6. User Guide

### Roles, Responsibilities

Integration will require a Commerce Cloud developer that is familiar with SFRA and Commerce Cloud code.

### Business Manager

#### Order overview

You can find a list of all orders under: **Merchant Tools → Ordering → Orders**

#### Advanced filtering

To perform an advanced search, take the following steps:

1. Click on **Advanced**
2. Select the attribute u want to filter on (example custom.mollieOrderId)
3. Select operator (equals, contains)
4. Fill in the attribute value
5. Click **Find**

You're using the new Search service.

This page allows you to search for orders by order number. Select **Advanced** to use more search options. Select **By Number** to search by providing a list of order numbers. Order numbers can be separated by either ',' or ';' or ':' or space or newline. Entered text is treated as case-sensitive; substring matching isn't supported.

5. Click on **Ship** to ship the order or products.

## Request payment link

Request payment link is managed by custom actions on the order itself.

6. Press the **Find Order** button.
7. Select an order
8. Press the **More** button on the top right corner and select **Request payment link**.  
Only orders that are OPEN/NEW/CANCELED/FAILED can be requested for a payment

link.

Send payment link

<https://www.mollie.com/paymentscreen/testmode/?method=mistercash&token=1.cnc1ma>

9. Click on **Send** to send the payment link to the customer.
  - a. Please note that Salesforce does not provide mailing, the integrator needs to implement this by extending / overwrite the *bm\_mollie/cartridge/scripts/payment/paymentLink* file

## Jobs

There is 1 job available that will handle status updates when Mollie can't reach the SFCC webhook call to update the orders. The job will request the payment status from mollie AAnd update the SFCC order accordingly. Make sure to change the scope to the required sites.

Job: custom.CSComponents.FailExpiredOrders

Parameters:

- ExpireAfterHours
  - The job will collect orders with the CREATED status that are older than the specified number of hours
- IsDisabled
  - Enable to skip the step

## 7. Backwards compatibility

By doing some minor code changes, the cartridge also supports versions < 6.0.0. The required code changes are marked with comments.

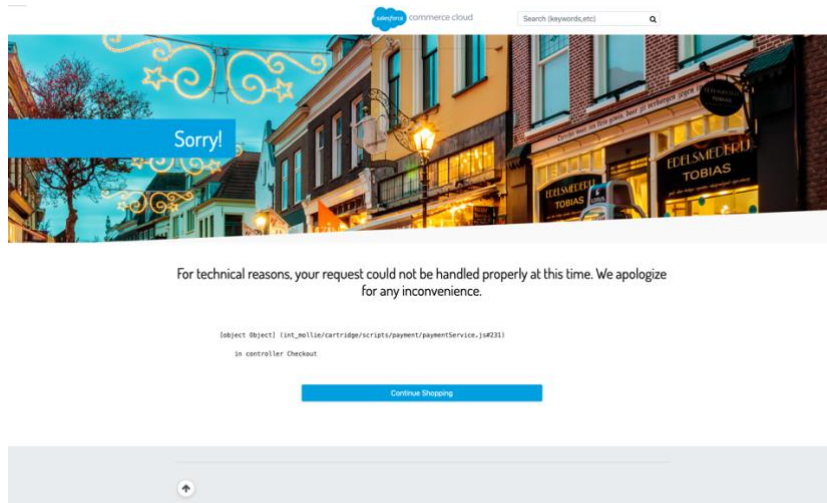

Example:

```
// Uncomment block to support SFRA < 6.0.0
// var orderToken = order.orderToken;
// var url = URLUtils.https('Order-Confirm', 'ID', orderId, 'token', orderToken).toString();

// Comment block to support SFRA < 6.0.0
var url = URLUtils.https('Order-Confirm').toString();
// End block
```

## 8. Fail-over & Recovery Process

If the Mollie service is unavailable or a technical error occurs, the user will not be able to checkout. The standard error page will be displayed.

The stacktrace will not be visible on the Production instance.

The service availability in the Business Manager can be used to track the Service Status. Technical errors that occur will be logged in the error log. The log level defined in the custom preferences should be added to the Custom Log Settings in the Business Manager. Technical errors related to the **createPayment** & **createOrder** services will be added to the order notes.

More about Mollie error statuses here: <https://docs.mollie.com/overview/handling-errors>

## 9. Known Issues

No known issues

## 10. Release History

Version	Date	Changes
21.1.0	2021-05-18	Initial release
